Summary

Results-driven Business and Product Analyst with 4+ years of experience delivering data-informed, user-centric solutions across fintech, logistics, ERP, and crypto intelligence platforms. Proven track record of building analytics frameworks, freemium growth loops, and AI-powered content systems that drive measurable product and business outcomes.

Professional Experience

Yirifi – Crypto & Digital Asset Intelligence Platform

Business Analyst [Sep 2025 – Jun 2026]

- Designed a product analytics framework across 3 core user layers (consumption, creation, collaboration) spanning 14 platform modules, enabling data-driven feature prioritization and content investment decisions
 - Defined B2C vs. B2B segmentation strategy — freemium consumption model for mass acquisition, premium creation/collaboration tools for enterprise clients — directly informing roadmap and resource allocation
 - Architected a freemium growth loop: content discovery (social, newsletters, podcasts) → gated platform modules → upsell to creation and collaboration tools, reducing reliance on third-party channels
 - Collaborated with design to map cross-module synergies (news → research reports → document templates) and simplify onboarding across 14 modules, resolving a conflated website/web-app UX that was causing drop-off and improving session depth per visit
 - Led full marketing website redesign separating it from the web app, with module-specific landing pages and CTAs funneling users directly into platform experiences
 - Developed a quarterly content framework with defined pillars (regulatory depth, product education, viral/awareness, expert vs. beginner) broken into monthly and weekly editorial plans tied to product launch milestones
 - Created module-specific content formats — daily news, in-depth research newsletters, vendor spotlights — aligning platform offerings with distribution channels to drive platform-native engagement
 - Architected a multi-agent AI content pipeline automating end-to-end production: web research → outline & source identification → draft generation → SEO/AEO optimization → visual generation (data diagrams, thumbnails, LinkedIn carousels)
 - Pipeline produced 20+ content assets per week — 2 long-form blog articles, 4 LinkedIn content pieces per blog topic, and on-demand news content — scaled to quarterly strategy targets without incremental headcount
-

Karobar – Mobile & Web Accounting Platform

Lead Product Analyst [Jan 2024 – Aug 2025]

- Assisted in a full-stack revamp across Mobile and Web for over 250K user base

- Designed and ran a 50-company closed beta. Triangulated >1,200 feedback points from calls, ticket logs, store reviews and interviews into a weighted backlog
 - Instrumented the AAARRR metric tree into end-to-end Mixpanel dashboards that gave self-serve product insight. D30 retention from 38% → 54%, 30% growth on DAU via targeted nudges
 - Implemented multi-channel Integrated Meta & Google ad pixels analytics, enabling ROAS measurement
 - Produced comprehensive documentation and Knowledge Base of the entire product including in-app tooltips, FAQs and video tutorials
-

Seven Ledger – ERP for Wholesale Businesses

Business Analyst [Jan 2023 – Dec 2023]

- Ran deep-dive interviews to translate complex wholesale workflows into BRDs/PRDs and detailed acceptance criteria for 12 enterprise distributors, converting insights into bespoke ERPs
 - Mapped the end-to-end metric tree and north-star KPIs for the daily workflow for the users
-

Upaya City Cargo – Logistics Super-App

Business Analyst / Product Operations [Sep 2021 – Dec 2022]

- Scaled a brand-new on-demand 2-wheeler fleet from zero to \$200K GMV and net positive business operations in Year 1. Defined launch plan, rider incentives and unit-economics that delivered positive contribution margin by month 6
 - Authored crystal-clear PRDs & acceptance tests for 30+ features (live-tracking, COD reconciliation, geo-location)
 - Created live operations Dashboard in Graphana and Looker Studio with Operation level KPIs — on-time-delivery SLA stayed above 90% while idle rider time fell below 12%
 - Balanced a two-sided marketplace of Drivers and Clients and calculated seasonality-aware demand/supply forecasters
 - Led enterprise integrations that powered 60%+ of order volume
 - Communicated data-driven stories to leadership. Dashboards and ROI memos secured additional cap-ex for expansion
-

Education

BBA (Investment & Economics) – 2022 King's College, Westcliff University

Skills

Market Research & Strategy User Interviews & Surveys (Qualitative & Quantitative Research) | Competitive Benchmarking & SWOT Analysis | Market Size Estimation | Go-to-Market Strategy Input | Industry Trend Monitoring | Freemium Growth Modeling | Content Strategy & Editorial Planning
